## Epidemic history and baseline resistance to NS5A-specific direct acting drugs of hepatitis C virus in Spain

Claudia Palladino<sup>1,4</sup>, Ifeanyi Jude Ezeonwumelu<sup>1,4</sup>, Irene Mate-Cano<sup>2</sup>, Pedro Borrego<sup>1</sup>, Paula Martínez-Román<sup>2</sup>, Sonia Arca-Lafuente<sup>2</sup>, Salvador Resino<sup>2</sup>, Nuno Taveira<sup>1,3</sup> & Verónica Briz<sup>2</sup>

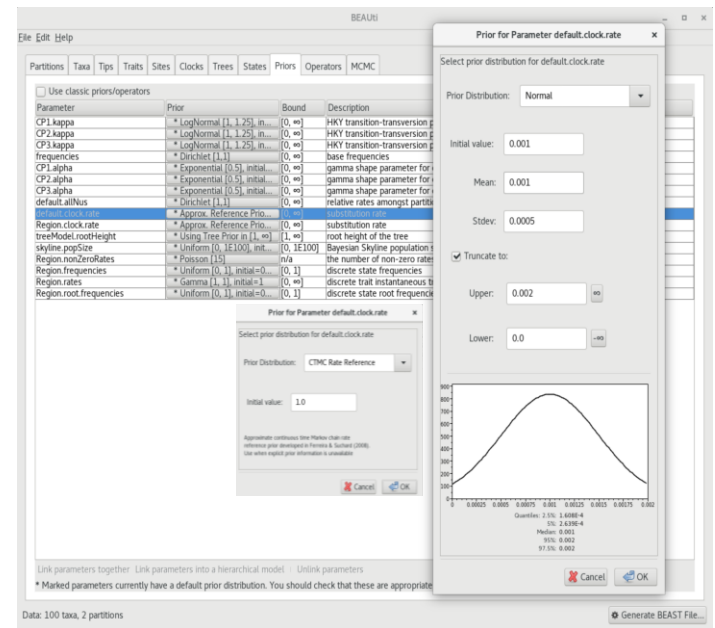

# BEAUi and the BEAST

The BEAST package contains a suite of programmes for computing Bayesian Evolutionary Analysis and Trees Sampling.

## BEAUi | Bayesian Evolutionary Analysis Utility:

This program is used to import data (*FASTA* & *NEXUS*), design the analysis, and generate the BEAST control (*XML*) file.

BEAST | Bayesian Evolutionary Analysis Sampling Trees:  
This is the main program that takes as input, **XML** files generated by BEAUi and performs the analysis.

# BEAST: Output Analysis

LogCombiner | This is a utility program that will combine log & tree files from different runs and reduce the sampling frequency (thin them).

TreeAnnotator | This is a post-analysis program that will produce a summary tree from the output of BEAST. Takes as input .tree files to generate a Maximum clade credibility tree.

Not included in the BEAST package but indispensable in BEAST Output Analysis

Tracer:

A graphical program for exploring the output of BEAST, diagnosing problems, and summarizing the results.

FigTree:

A graphical program for viewing trees, displaying summary information from TreeAnnotator and generating publication-ready figures.

# Spread3: Time-scaled Phylogeography

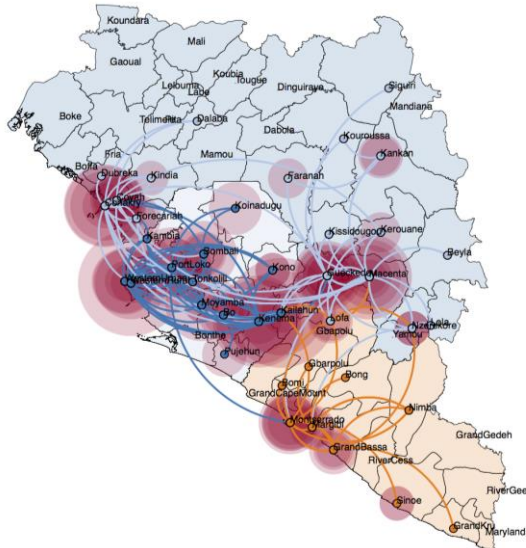

## Spread3 | (Spatial Phylogenetics Reconstruction of Evolutionary Dynamics using Data-Driven Documents (D3)):

A package for analysis and visualisation of pathogen phylodynamic reconstructions

Input:

- .mcc tree files & region.rates.log files (BEAST-BSSVS)
- .geoJSON file (map locations)
- Geographical coordinates text files

Output:

- Interactive visualizations of spatio-temporal phylogenies
- Bayes factor analysis for epidemic migrations

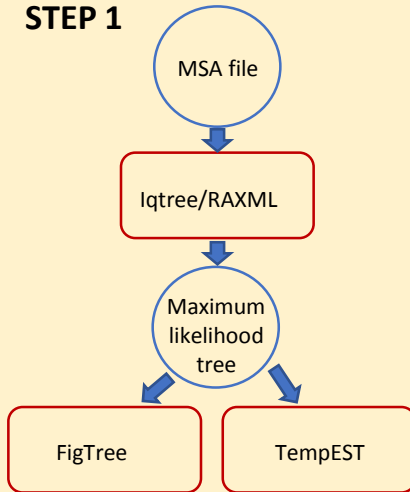

# Phylogeography Practice Session II:

## OUTLINE

### Session I

#### STEP 1

##### IqTree:

- ML tree

##### FigTree:

- Tree visualization

##### ClusterPicker:

- Transmission Clusters

##### TempEST:

- Remove outliers
- Determine Molecular clock likelihood

#### STEP 2

##### BEAUTi:

- Define data partitions, select models and define priors
- Decision on best Model/prior selection: specify MLE

##### BEAST:

- Bayesian Inference (MCMC)

### Session II

#### STEP 3

##### Tracer:

- Check for convergence of MCMC, visualize log files, summarize data.

##### LogCombiner:

- Combine output files

##### TreeAnnotator:

- Summarize tree files to Maximum clade credibility trees

#### STEP 4

##### spreaD3:

- Spatiotemporal visualization
- BF for location transitions
